

What Happened to Global Warming ?

Colder than MARS

Record low temperatures were experienced in Canada in the week after Christmas 2017. Some locations were colder than Mars. Are the climate change experts wrong or just early? Where are all the EVs we are told are going to replace ICE vehicles soon. Despite current observations, developers that are betting it is only a question of time, are starting projects in anticipation that EVs will go main stream and need charging infrastructure.

If you are building projects with net metering, storage, microgrids or EV charging, contact Cachelan to provide an [NRGpilot portal](#) for an EMS (Energy Management System) for operation and reporting.

Working from your SLD, an NRGpilot flexscreen is created to match equipment and display measurements for each different project.
